

Discover the best smart locking solutions for

Locker rooms

- Ultra-efficient use of locker capacity
- Easy managing and reporting system
- Easy to use: QR code, Pin code, company card and/or App

The future of locker rooms is here.

Imagine: a locker room that can be operated easy via QR, company card, etc. no more lost keys or forgotten pin-codes etc. and with real time analytics and control for the administrator.

They simply operate the locker via their phone (app, QR code, dedicated web page), company or club card or tag, or terminal, and can even reserve lockers in advance. Using some of the lockers for dispense functions, such as warehouse orderpicking tools, or new uniforms, is also easily done. For administrators, locker management is now a piece of cake: simply via their phone or a PC, where lockers can be operated individually, multiple or all at once, or set up for automatic processing. System admins are happy too: no more need to install and maintain software and servers.

3 Developed as one system: Matching hard- and software.

- Ultra-flexible and expandable
- Unique lock that can serve as both push2open and pop2open
- Enhance locker cabinets with features such as USB 1.0/3.0 power connection, cabinet and/or door lights, RFID and more
- Cloud operated: safe, secure, automatically updated, no servers needed
- 3rd party software system integration (API)

USE CASE NS (National Railways).

NS provides her employees with secure and easy to use smart lockers to store their personal belongings. In addition, the issue and return of company equipment is also entirely arranged via smart lockers. Train staff, for instance, pick up their walkie-talkies from a locker and return them there at the end of their shift. Any defects can then immediately be reported, after which the technical department is offered the repair directly in their workflow. The devices in the locker are charged using the power outlet, and the

system ensures that only charged devices are issued. Interested in other Keynius use cases? See www.keynius.eu/references

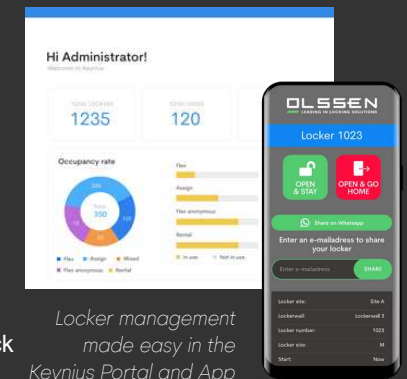

Smart locking reinvented.

Keynius is the global new standard in possibilities for 'anything with a lock'. We invent and sustainably develop smart, innovative and high-tech solutions that are easy to operate and

fun to use, to help companies become more profitable, help employees make their jobs easier, and help users to keep what is precious safe.
